

Business Requirements Document (BRD) - University Class Enrollment System

Version: 1.0
Role: Business Analyst (Entry Level)

1. Executive Summary

The Online Class Enrollment System is designed to provide a structured and automated course registration process for students and academic advisors. The system ensures that enrollment adheres to university policies regarding prerequisites, credit limits, and course capacity through real-time validation.

2. Business Scenario

University enrollment is a complex process involving multiple stakeholders. Students need a self-service portal to manage their academic journey, while advisors require monitoring tools to ensure students maintain academic standards and credit requirements. The system must maintain a high level of data integrity across a centralized database.

3. Functional Requirements

ID	Requirement Description	Priority
FR-01	User Categorization: The system shall differentiate between Undergraduate and Postgraduate students, while both inherit common registration features.	High
FR-02	Prerequisite Validation: The system shall automatically include a prerequisite check for every course registration attempt.	Critical

ID	Requirement Description	Priority
FR-03	Waitlist Functionality: If a course reaches full capacity, the system shall extend the registration flow to offer a waitlist option.	Medium
FR-04	Advisor Approval Workflow: Advisors must verify credit limits before approving elective requests and can request meetings for low GPA students.	High
FR-05	Enrollment Confirmation: Students shall be able to download a PDF confirmation of their final enrollment schedule.	Low

4. User Roles (Actors)

- **Undergraduate & Postgraduate Students:** Primary users who search, register, and manage their course schedules.
- **Academic Advisor:** Monitors student progress, approves/rejects elective requests, and manages credit limits.
- **Enrollment Database:** The central system of record for real-time course availability and registration status.

5. Business Rules & Constraints

Generalization: Both Undergraduate and Postgraduate students have a common "Student" profile but may have different course catalogs.

Condition-Based Flow: Registration is only completed IF Prerequisites = MET. If Prerequisites = NOT MET, the system blocks the registration attempt.

GPA Threshold: If Student GPA < [Threshold], the system extends the process by triggering a mandatory meeting request to the Advisor.
