

Business Requirements Document (BRD) - Hostel Management System

Version: 1.0
Role: Business Analyst (Entry Level)

1. Executive Summary

The Hostel Management System is an online platform designed to streamline the student accommodation process. It provides a centralized interface for room browsing, application submission, document verification, and resident services like maintenance requests.

2. Business Scenario

University hostels face challenges in managing room allocations and tracking resident requests manually. This system automates the lifecycle of a hostel resident—from the initial application (with strict eligibility checks) to managing day-to-day maintenance while living on campus.

3. Functional Requirements

ID	Requirement Description	Priority
FR-01	User Authentication: Students must log in via university credentials. The system shall handle failed logins with specific error messages.	Critical
FR-02	Eligibility Validation: The system must verify if a student is already an occupant or has a pending application before allowing a new submission.	Critical
FR-03	Document Management: Applicants must upload required supporting	High

ID	Requirement Description	Priority
	documents (Student ID and Admission Letter) during the application phase.	
FR-04	Application Tracking: Students shall be able to monitor their application status (Pending, Approved, Rejected) in real-time.	Medium
FR-05	Resident Support: Current residents shall have the functionality to submit maintenance and complaint requests through the portal.	Medium

4. User Roles (Actors)

- **Student (Applicant):** Browses rooms, uploads documents, and applies for accommodation.
- **Student (Resident):** Tracks application status and submits maintenance/complaint requests.
- **Hostel Allocation Database:** Maintains real-time data on room availability, resident status, and complaint logs.

5. Business Rules & Logic

Single Occupancy Rule: A student cannot hold more than one active application or room allocation at any given time. The system must perform an 'Occupancy Check' against the database before proceeding to the document upload stage.

Cancellation Policy: Applications can ONLY be cancelled if the current status is "Pending". Once "Approved", the cancellation feature is disabled for the user.

Maintenance Access: The "Maintenance Request" feature is only visible and accessible to students whose status in the database is marked as "Current Resident".
